NEWS RELEASE

Dynamic Systems Announces Upgrade to CheckMate Tracking Software for Department of Defense

March 25, 2010/Redmond, Washington/ Dynamic Systems, Inc., a Redmond, Washington software developer, specializing in barcode data collection applications, has announced the release of CheckMate for DOD, which integrates Toolroom (Tool Tracking), Document Tracking and Stockroom (Inventory control) into a common database. The software may be purchased in modules or as a full suite.

CheckMate Designed for DOD

CheckMate Software uses CAC Cards to identify the person responsible for each transaction, converting the SSN on the card to a generic "badge number" in the system for privacy purposes. The system has been designed per military requirements to preserve Chain of Custody – for example, the same badge that checks out a tool is required to check the tool back in.

Deployment of Tools & Equipment

CheckMate Toolroom has a Deployment Option, which tracks a kit or subset of tools and equipment from a large inventory that are sent to another location (truck, overseas location, etc.), then allows those tools and equipment to be checked out again to CAC cardholders at that location. This option has been used to track tools and equipment deployed to locations overseas.

Easy to Use

The CheckMate software is very easy to use; training time is minimal. The system comes with one hour of training and one year of phone technical support.
